

Installation Guide / User Manual

Project: Slugtrades

Team Name: Slug Traders

Release 1

Sunday June 3, 2018

Version 1.0.0

Mac / Linux

1. Install python version 3.6.5 on the command line or from <https://www.python.org/downloads/>
2. Clone the repository from <https://github.com/Sidney-/slugtrade>
3. Open a terminal
4. Navigate into the directory slugtrade/slug_trade
5. Run the command ./first_start.sh. When you are prompted with “Are you sure you want to do this?”, type “yes” and press enter
6. Note: the server will be running on port 8000 when the script finishes. You can then view the app at: <http://localhost:8000/>

Windows

1. Install python version 3.6.5 from <https://www.python.org/downloads/>
2. Set python and pip in your Path environment variable
3. Clone the repository from <https://github.com/Sidney-/slugtrade>
4. Go to the Windows File Explorer and open the directory slugtrade/slug_trade
5. Double click the file called windows_first_start.bat. When you are prompted with “Are you sure you want to do this?”, type “yes” and press enter
6. Note: the server will be running on port 8000 when the script finishes. You can then view the app at: <http://localhost:8000/>
